

FIREWALL

PERIMETER E-SECURITY

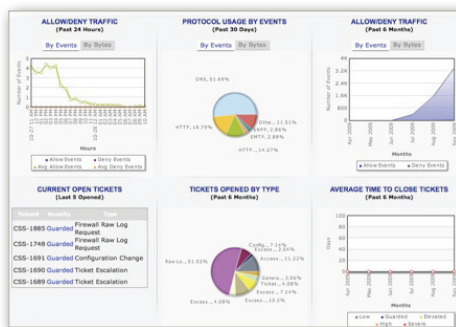

- ▶ Providing a single, complete source for all your security needs since 1997
- ▶ Constant, around the clock monitoring with over 150 security personnel analyzing information 24/7/365
- ▶ Continuous third party assessments including an annual SAS 70 Type II and Cybertrust security audit
- ▶ Three redundant data centers and seven offices nationwide
- ▶ Servicing over 2,000 financial institutions in the United States

PERIMETER E-SECURITY FIREWALL OVERVIEW

No matter which other security services you subscribe to, firewalls should always be the first line of defense in protecting your corporate network. Besides being the building block of an organization's network security architecture, firewalls are also a top method in ensuring network uptime while preventing unauthorized access - all critical points in keeping critical business operations running smoothly. Whether you choose our completely managed firewall service, Defender In-The-Cloud, or prefer your hardware on-site with the UTM bundle, you can rest assured that your network has the ultimate level of protection, as well as the best performance, scalability, and reliability available to you.

With Perimeter E-Security's Firewall service, you are not only protected against malicious intruders or attacks, but you also receive reporting that shows exactly what is getting through to your network and what is getting blocked at the gateway. Perimeter E-Security's Firewall Service has been completely redesigned to utilize ViewPoint's complete and robust reporting capabilities. Not only do you get a "complete" picture of your firewall traffic in one-click, but you can also drill down to see exact events on an IP address-level basis. Configurations to your firewall can be conveniently requested in the ViewPoint portal, saving your organization time so you can focus on keeping the business running successfully.

THE BENEFITS OF PERIMETER'S SERVICE

Key Features	Benefits
Superior Visibility/Reports	Thorough reporting including the ability to drill down to source & destination IP addresses by connection, ability to review connections by direction, ability to review port usage, ability to review the number of bytes by direction and IP address (on some models), and high-level summaries of traffic across all firewalls or individual firewalls
Regulatory Requirements	Compliance reports out of the box covering several regulations, including PCI, GLBA, Sarbanes-Oxley, etc
Customizable Alerts	Alerts that monitor traffic for thresholds you set can be activated and will send notifications to users of your choice when these thresholds are met
Cost Effective	Eliminate the time spent managing configurations and updates and greatly reduce time spent researching internal and external users of your hardware through built-in easy-to-use tools
Easy Configuration	Current device configuration and historical device configurations are available anytime in the portal along with built-in tools to create and export differentials among configurations
Scalable Environment	Integrate other security solutions, such as IDS/IPS, Web Content Filtering, Web Browsing AV, and VPN, easily while leveraging the power and convenience of ViewPoint
